

Science task

6.4.20

Last week, I asked you to look at different habitats around the world and create a poster.

This week, I would like you to look at food chains. You can watch this video to find out more.

<https://www.bbc.co.uk/bitesize/clips/z96r82p>

Producers and consumers

Plants get their energy from the Sun. They are called **producers** because they make their own food.

Animals are called **consumers** because they eat plants and other animals. They do not make their own food.

Animals that eat other animals are called **predators**. The animals they eat are called **prey**.

Snails vs hedgehog - Predator or prey?

Snails eat leaves and hedgehogs eat snails. So, the hedgehog is the predator. It gets its energy from eating the snail. Predators eat other animals.

The snail is the prey. It's the animal that gets eaten!

Task:

You are going to create 4 food chains for animals from different

1. Pick a habitat (Polar/Ocean/Woodland/Rainforest)
2. Research food chains from that habitat
3. Draw and label your food chains- be creative in how

CHALLENGE- Try to present each habitat differently!

Here are some ideas:

habitats.

you create it!
